---

## Professional Summary

Passionate Information Technology student with strong skills in Python, JavaScript, React, HTML and CSS. Experienced in building responsive web applications and solving programming problems using Data Structures and Algorithms. Currently exploring Artificial Intelligence and eager to build innovative technology solutions through hackathons and collaborative software development.

## Projects

|                                                                                                                                                                                                                                                                                               |                  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>AI Resume Analyzer</b>                                                                                                                                                                                                                                                                     | Python, React    |
| <ul style="list-style-type: none"><li>Developed a web application that analyzes resumes and provides ATS-friendly improvement suggestions.</li><li>Implemented resume parsing and keyword matching for better resume evaluation.</li><li>Built an interactive frontend using React.</li></ul> |                  |
| <b>Personal Portfolio Website</b>                                                                                                                                                                                                                                                             | React, HTML, CSS |
| <ul style="list-style-type: none"><li>Designed and developed a fully responsive portfolio website.</li><li>Showcased projects, technical skills and achievements.</li><li>Optimized the website for mobile and desktop devices.</li></ul>                                                     |                  |

---

## Technical Skills

- Languages:** Python, JavaScript
  - Frontend:** HTML, CSS, React
  - Core Subjects:** Data Structures & Algorithms, OOP
  - Tools:** Git, GitHub, VS Code
  - Currently Learning:** Artificial Intelligence, Machine Learning
- 

## Achievements

- Solved 200+ programming and Data Structures problems.
  - Active participant in coding contests and technical events.
  - Built multiple responsive web applications using React.
- 

## Certifications

|                                                                       |          |
|-----------------------------------------------------------------------|----------|
| <b>Deloitte Data Analytics Job Simulation</b> – Forage                | Jul 2025 |
| – Completed practical tasks in Data Analysis and Forensic Technology. |          |
| <b>Python For Beginners Course In-Depth</b> – Udemy                   | Feb 2026 |

---

## Leadership & Extracurricular

- Volunteer, National Service Scheme (NSS)
- Winner – Basketball Competition, Parakram 2024
